

possible to detect and describe natural phenomena during the relative weakening of the cause and effect relations, the tectonic catastrophes being the prime example. The prospects of such prognosis via ISRICA's Kozirev's Mirrors was previously discussed at the SSE International Forum (Boulder, 2011) and the 3rd Earth Science and Climate Change Conference (San Francisco, 2014). The last trial was conducted during the APP conference (Las Vegas, 2017), dedicated to Remote Viewing issues. On the 24th of June, 2017 in Novosibirsk, Russia, while my consciousness was quantum superimposed to the moon, I was able to make a prognosis on the seismic activity in the vicinity of the San Andreas geological fault. The accuracy of that prediction made 2 weeks prior turned out to be 90%, with the recorded intensity of the earthquakes (measured according to the Richter's scale) as well as time and place of them occurring all matching the prognosis protocol data almost perfectly.

taisia.ill@mail.ru

kirlianography by K. Korotkov) been identified the effect of resonant enhancement of the spectral density of the luminescence of the human body in the frequency range, related to Schumann Resonance in the group of volunteers (n=38), was 48 hours before the solar flares. Thus the biofield structures of people in the «Kozirev space» in advance responded to solar and atmospheric «storms». According to a hypothesis of astrophysics N.Kozyrev, time makes the connection between all the phenomena of nature, actively participates in them, that is allowed «advanced» event registration not yet implemented in the present.

In order to develop and test of the method of «advancing» the registration of seismo-volcanic disasters in the associated «micro-pulsations – harbingers» in the low frequency range of electromagnetic oscillations of the ionosphere and man, was applied cardiospectral analysis «Veda Pulse» (company «Biokvant», Russia). This device is designed for recording low-frequency components in the dynamics of cardiac activity of the operator, located in the «Kozirev Mirrors» to perform a predictive task.

In 11 Aug 1917, during the influence microtectonics electromagnetic radiation one of the natural objects (mountain Rtanj in Serbia) we have registered «forced synchronization» mode hearts of two remotely separated (4,500 km) of volunteers-researchers, had been staying in the «Kozirev space» by two the same device «Veda Pulse». Received fact created the scientific basis for further recording cardiospectra of person in the «Kozirev Mirrors» in the days, had been predicted for natural disasters in 2018.

NEW SCIENTIFIC TECHNOLOGY OF
THE FORECASTING OF NATURAL
HAZARDS INTO MODELLED "KOZYREV'S SPACE"

**ABOUT THE POSSIBILITY OF OUTSTRIPPING
REGISTRATION OF NATURAL DISASTERS IN
THE LOW FREQUENCY RANGE OF THE CHANNEL
«IONOSPHERE-EARTH – MAN» IN THE MODELED
SPACE KOZYREV**

Oseeva Olga

International Scientific Research Institute of Cosmoplanetary Anthropoecology named after academician V.P.Kaznacheev, Novosibirsk, Russia
Russian Cosmic Society

During the time of the conducted researches in modeled the «Kozirev space»(ISRICA) using the method of gas discharge visualization (computer

The creation of The Russian Cosmic Society is a natural and logical step in the development of modern Russia. This step is due to the noospheric-cosmic breakthrough which expresses the formation of the space age of mankind.

We have to understand that the Earth is a cosmic object and every person living on Earth is a cosmic subject, a resident of space. Man and Earth is a single system. Together they fly in Space under control of certain space-time and cycling processes of Nature.

Knowledge of these laws and their correct application is the key to a breakthrough in the future of space!

Direction of activity

The activity of the Russian Cosmic Society is in a project-target nature where the goal is the preservation and development of life on Earth and in space. The projects united in a single logic of co-creation, relate to the following main areas of practical activity:

1. Preparation of the scientific basis for the elaboration of the development strategy of Russia's space future in the world.
2. Study and understanding the system of common laws of the cosmos and the law of conservation cyclic development of Life.
3. Formation of noospheric-space human studies, development and usage of human creativity, his mind and hidden reserves.
4. Popularization, dissemination, development and practical use of the ideas of Russian Cosmism and Cosmonautics following the interests of security and sustainable development of Russian civilization, Russia and mankind. Working with young people has a special place in this direction.
5. Preservation and study of philosophical, scientific, historical and cultural heritage of outstanding representatives of Russian cosmism.
6. Formation of holistic worldview of the human world capable and realizing his ability to scientific creativity in the name of preserving the development of Life on Earth and in Space. Such person is a combination of four elements: 1) investigator; 2)

designer-technologist; 3) manager responsible for the result; 4) teacher and creator.

7. Using the potential of hidden space reserves through the birth of new ideas. The implementation of these ideas into an innovative technological product ensures safety and acceleration of development at the local, regional and global levels.

8. Rise of the effectiveness, efficiency and quality of educational, research, design, organizational and enlightening activities used in space and in related areas.

9. Providing scientific forecasting and designing social and noospheric evolution of people on the planet as a space object.

10. Active participation in solving problems in the development of national theoretical and practical space.

11. Participation in the working out a global system of space environmental, geophysical monitoring of Earth as an essential mechanism for the managed socio-natural evolution.

12. Participation in the implementation of Russia's priority projects in the Arctic, the far East and space.

NEW SCIENTIFIC TECHNOLOGY OF THE FORECASTING OF NATURAL HAZARDS INTO MODELLED "KOZYREV'S SPACE"

Trofimov Alexander

International Scientific-Research Institute of Cosmoplanetary Anthropoecology, Russia Russian Cosmic Society

In accordance with the hypothesis of Russian astrophysicist N.A.Kozyrev, Time creates the connection between all the nature phenomena and actively participating in them, is able to reduce the entropy of processes and their results which are often manifesting by explosive strengthening of chaos in the form of various natural disasters. The degree of Time activity, called its density, can be experimentally increased (in relation to energy-time flows, emitted by the brain of a person or a research group) with the use of special aluminum screens, conventionally called, by Novosibirsk scientists,

"Kozyrev's mirrors" (Kaznacheev, Trofimov, 1992, patent RF № 2122446 dated 1998).

The ability to reflect and focus Time action by a concave mirror allows the trained researchers to observe and describe (under the electroencephalographic control of the functional activity of the brain) under the conditions of a modeled compaction of their "energy-time", using the method of "mirror-quantum superposition of consciousness" developed in our Institute, natural processes under conditions of relative weakening and theoretically permissible inversion of causes and their consequences, including different tectonic, volcanic and climatic disasters, including hurricanes up to their actual manifestation. The possibility of predicting monitoring of the Future is opening!

Perspectives of predicting natural disasters from "Kozyrev's mirrors" have been discussed at the first time at International scientific forums SSE (Boulder, 2011) and the 3-rd Earth Science and Climate Change Conference (San Francisco, 2014). In further a database was formatted allowing successfully realize scientific demonstration of the new technology on-line

at the conference APP (Las Vegas, 2017), devoted to the problems «Remote Viewing». In "Kozyrev's Mirrors" in Novosibirsk physicians-researchers T.Kuznetsova and O.Oseeva have compiled a short and long-term forecast of seismic activity in the area of the San-Andreas geological fault in California. The effectiveness of the forecast with a lead time of 1 week was 90%: the earthquakes were recorded with exactly predicted force by Richter scale, in days and places, indicated in the protocols. The results of the long-term forecast (in months and years) have yet to be discussed.

In perspectives of further development of this International project the possibilities of not only heliogeological monitoring and long-term forecast, but also the creation of a «mirror-preventive», in relation to natural hazards, technology that enhances

negentropic tendencies and weakens their destructive effects, may be investigated.

ON THE POSSIBILITY OF EARTHQUAKE PREDICTIONS WHILE OBSERVING BINARY PLANETARY "EARTH-MOON" SYSTEM IN A MODELED "KOZYREV'S SPACE"

Kuznetsova Taisia

International Scientific Research Institute of Cosmoplanetary Anthropoecology named after academician V.P. Kaznacheev, Novosibirsk, Russia Russian Cosmic Society

According to a Russian astrophysicist N. Kozyrev's hypothesis, time is a link between all natural phenomena and it plays an active part in all of them. By comparing the data on the number of earthquakes and lunar events from B. Middlehurst's catalogue (B. Middlehurst, 1967) N. Kozyrev determined that there was a connection between Earth's tectonic processes and various lunar events evident from the material properties of time. N. Kozyrev demonstrated that astronomical events observed on the moon take place some time before earthquakes on our planet. At the same time when the significant periodical weakening of the Earth and the Moon crusts happens it allows the gravitational pull of the Moon to affect the Earth's tectonics; this process repeats every 14 days. Kozyrev's research opened up new ways to detect earthquakes 2 weeks prior to them happening on Earth. The development and testing of the new seismic prognosis method became the focus of this research. By using the "quantum mirror superposition of consciousness" method it became
